

An ISO 9001:2015 certified company.

**We perform
under pressure.**

PDC Machines, the world's leading manufacturer of hydrogen gas compressors, will be exhibiting at the Hydrogen + Fuel Cells North America in Anaheim, California September 24-27, 2018. We will be co-located with Solar Power International in Anaheim, California September 24-27, 2018.

PDC is the # 1 supplier of diaphragm gas compressors for the hydrogen powered fuel cell automotive, bus and material handling market with nearly 350 compressor installations and still counting. We specialize in providing complete solutions for hydrogen applications:-

Re-fueling Stations

From compression modules through full-scale commercial stations for vehicles, buses, trucks and material handling.

SimpleFuel™ Re-fueling

Re-fueling station including on-site hydrogen generation, compression, storage and dispensing. Ideal for warehouse and small fleet vehicle operations.

Component and Systems Integration

With decades of experience in hydrogen compression systems and integration, PDC is the preferred source for component and system packaging for hydrogen fueling applications.

Pressure Boosting

Pressure boosting of hydrogen gas across a wide range of industries from power to gas to chemical processing.

Unlike many traditional compressors, PDC diaphragm gas compressors are ideally suited for compressing hydrogen in a leak free, contamination free manner.

PDC have an extensive line of diaphragm compressors ranging from bare units to fully automated compression systems. We have with a comprehensive assortment of options to customize our units specific to the end users requirements.

To learn more about PDC Machines capabilities and how we can bring our solutions to your challenges, please visit us at booth No. 4263 at the Anaheim Convention Centre.
